**The new Tour X family** offers an array of radical new features that redefine the modern loudspeaker, all combined in an amazingly affordable package.

Providing incredibly low distortion with high sensitivity, all-new SMX woofers are designed utilizing predictive analysis tools not available to any other loudspeaker manufacturer. The result? An efficient, high-output woofer with a perfectly linear motor structure and suspension that doesn't require an enormous, expensive amplifier to produce high SPL. When matched with one of Electro-Voice's amplifiers, your Tour X rig will offer an incredible performance to size ratio.

The Tour X "backbone" grille design is so special that it has a patent pending. But the unique aesthetics that stand out in the crowd are only half the story; the real functionality of this design is the strength advantage that it has over standard grille designs. Built to withstand real-world use and abuse, Tour X will keep on looking and sounding great, no matter what you put them through.

If you're serious about loudspeakers, you need to hear Tour X today.
